

VECTOR DESIGNS

At Cabanes we have always been concerned with providing a complete service for our clients, and we were the first company to have a design studio producing images such as religious motifs, ornamental work, friezes, coats of arms, etc., with a high level of detail yet easy to peel. We also produce lettering and old models using the pantograph method.

Cabanes currently owns the largest collection of ornamental images for plotters on the market, and continues to create graphic works by order or for new collections.

All of our drawings are made with a high level of detail, but always looking for rounded corners for easy peeling and thick lines and united that are not moved when we recorded with the sandblasting.

All our drawings are sent in EPS and AI format so they can be cut with any labeling program or cut to plotter.
