# SOFTWARE CSH-6.0

Cabanes Engraving Technology

With more than 30 years of experience on the market, we have developed software created specifically for memorial masons. The program is designed to create inscriptions quickly and easily, and is specifically created for people who have no previous computer experience. You simply choose the type of font, the height and the line separation.

Once the whole text has been written, you indicate the total size of the inscription and give the command to start cutting. The process with images is exactly the same.

You simply select the image, indicate the size and give the command to begin cutting.
